1 Overview

This document lists in details every available command, alias and macro. You will also find in the alias section an explanation as to how to define your own aliases.

2 Commands

2.1 image

2.1.1 Description

Arguments: Takes one mandatory argument, which is the name or the path to an image with its extension.

Can take an optional argument which is a scaling ratio: for example, 0.5 corresponds to a scaling ratio of 50%, so the image will be twice as small. You do not need to scale the images already loaded in The Sleeping Lion, they are already at the correct size.

Description: Displays the image on the card.

Example:

```
Attack \image{attack.svg} 1  
Range \image{range.svg} 3  
Stun \image{stun.svg}
```

2.1.2 Available images

The following images are already loaded into The Sleeping Lion, and can be used as they are.

- attack.svg
- move.svg
- range.svg
- target.svg
- heal.svg
- shield.svg
- retaliate.svg
- loot.svg
- jump.svg
- fly.svg
- muddle.svg
- wound.svg
- poison.svg
- immobilize.svg
- disarm.svg
- stun.svg
- curse.svg
- bless.svg
- strengthen.svg
- invisible.svg
- fire.svg
- ice.svg
- earth.svg
- wind.svg
- dark.svg
- light.svg
- any_element.svg
- add_target.svg
- consume.svg
- definitive_loss.svg

- experience.svg
- pierce.svg
- infinity.svg
- recover_card.svg
- loss.svg
- round_bonus.svg

2.1.3 Using your own images

The image can also be a custom image like a new status effect. In this case, you should give \image a relative path from the .gml file to the custom image (a path starting from the folder in which the .gml file is stored). A nice and easy way to do this is to have the following architecture:

```

my_character.gml
└── Images
    ├── custom_image1.svg
    └── custom_image2.svg

```

With this structure, displaying `custom_image1.svg` can be done by writing `\image{Images/custom_image1.svg}`.

To help adjust you image at the correct height with regards to the text, see the `template.svg` file in the ‘assets’ folder. By default, an image is drawn with a size of 1.4 times the font size. Out of an image of height 110 (font size 100 on Inkscape):

- the text baseline (bottom of letter A) is located at 31.3 from the bottom (73.7 from top)
- the top of A is at 78.3 from the bottom (21.7 from top)

You will find in the `template.svg` file two Inkscape guides corresponding to those measures.

2.2 aoe

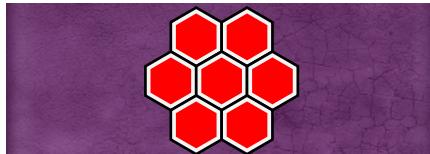

2.2.1 Description

Arguments: Takes one mandatory argument, which it the name or the path to an area of effect with its extension. Only `.aoe` files are accepted.

Description: Displays the corresponding area of effect.

Example:

```
\aoe{full_hexagon.aoe}
```

2.2.2 Available area of effects

The following area of effects are already loaded into The Sleeping Lion, and can be used as they are.

- adjacent_two_hexes.aoe
- adjacent_three_hexes.aoe
- adjacent_triangle.aoe
- skewer.aoe
- long_skewer.aoe
- triangle.aoe
- full_hexagon.aoe
- cataclysm.aoe

2.2.3 Using your own area of effects

It is highly recommended you use The Sleeping Lion's inbuilt tool to create your custom area of effects. This tool allows you to easily build any shape, and give any color to the hexagons. This tool will also save your area of effects to a specific format using the .aoe extension. Note that these files are separate from your .gml file, and should be included like any custom image when sharing your class.

2.3 exp

Arguments: Takes one argument, which will always be displayed as text.

Description: Displays an experience symbol with the given value.

Example:

\exp{1}

2.4 multiline

Arguments: Takes an unlimited number of arguments, which should be GML instructions.

Description: Displays the GML instructions one under the other, but does not break the line layout.

Example:

\consume_fire \multiline{\retaliate{2}}{@small Self} \exp{1}

2.5 charges

Arguments: Takes up to 6 arguments, each representing a charge. They may be empty (nothing will be displayed inside the charge) or they may hold GML instructions which will be displayed inside the charge.

Description: This command allows you to build actions such as the Tin-kerer's Potent Potables, which reads "On your next four heal actions, add +2 Heal". Each argument represents one charge of the action, so the number of arguments you give to \charges will be the number of charges displayed on the

card. This command will also add the "infinity" symbol before the first charge and a "loss" symbol after the last one.

Example:

```
@small On your next four heal actions, add +2 Heal \image{heal.svg}\charges{}{\exp{1}}{}{\exp{1}}
```

2.6 charges_non_loss

Arguments: Same as the \charges command.

Description: Same as the \charges command, except the loss symbol will not be displayed.

Example:

```
@small On your next two attacks, add +2 Attack \image{attack.svg}\charges_non_loss{}{\exp{1}}
```

2.7 summon

Arguments: Takes 6 or 7 arguments, which can be empty or GML instructions.

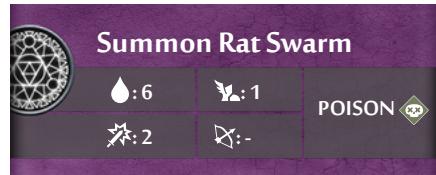

Description: Displays a summon action. The arguments correspond to the following (in order):

- the name of the summon
- its hit points value
- its movement value
- its attack value
- its range value
- the summon's special abilities
- (optional) if this argument is given, the part with the summon's special abilities will be split into two.

This command does not display the "infinity" symbol underneath the summon. It is up to you to define on a separate line all symbols which should appear under the summon (usually, this is experience, element generation, "loss" symbol...).

Example:

```
\summon{Summon Rat Swarm}{6}{1}{2}{\poison}
```

```
\summon{Summon Mosquito Swarm}{4}{1} \image{fly.svg}{1}{3}{\wound}{\retaliate{1}}
```

2.8 divider_line

Arguments: This command doesn't take any arguments.

Description: Displays a thin dotted line which can be used to separate actions in order to remove any ambiguity. This was introduced in Jaws of The Lion and Forgotten Circles, and isn't used in Gloomhaven.

Example:

```
\attack{1}
\divider_line
\attack{1}
```

2.9 dot

Arguments: This command doesn't take any arguments.

Description: Displays the enhancement dot icon.

Example:

```
\attack{3} \dot \dot
```

2.10 inside

Arguments: Takes two arguments, which should be GML instructions.

Description: The first argument represents the outer instruction: the second argument represents the inner instruction which will be displayed centered inside the outer instruction.

Example:

```
\inside{\image{experience.svg}}{@color{255}{0}{0} 1}
```

3 Aliases

The following sections list all available aliases. For each, you will find a small example, as well as the explicit definition of the alias.

3.1 Available aliases

3.1.1 attack

```
\attack{3}
```

Attack ⚡ 3

```
\attack{$x$} = Attack \image{attack.svg} $x$
```

3.1.2 target

```
\target{3}
```

Target ◎ 3

```
\target{$x$} = Target \image{target.svg} $x$
```

3.1.3 move

```
\move{3}
```

Move 🚶 3

```
\move{$x$} = Move \image{move.svg} $x$
```

3.1.4 range

```
\range{3}
```

Range ⚔ 3

```
\range{$x$} = Range \image{range.svg} $x$
```

3.1.5 heal

```
\heal{3}
```

Heal 💧 3

```
\heal{$x$} = Heal \image{heal.svg} $x$
```

3.1.6 shield

```
\shield{3}
```

Shield ⚡ 3

```
\shield{$x$} = Shield \image{shield.svg} $x$
```

3.1.7 retaliate

\retaliate{3}

\retaliate{\$x\$} = Retaliate \image{retaliate.svg} \$x\$

3.1.8 loot

\loot{3}

\loot{\$x\$} = Loot \image{loot.svg} \$x\$

3.1.9 push

\push{3}

\push{\$x\$} = PUSH \image{push.svg} \$x\$

3.1.10 pull

\pull{3}

\pull{\$x\$} = PULL \image{pull.svg} \$x\$

3.1.11 jump

\jump

\jump = Jump \image{jump.svg}

3.1.12 muddle

\muddle

\muddle = MUDDLE \image{muddle.svg}

3.1.13 poison

\poison

\poison = POISON \image{poison.svg}

3.1.14 wound

\wound

\wound = WOUND \image{wound.svg}

3.1.15 immobilize

\immobilize

\immobilize = IMMOBILIZE \image{immobilize.svg}

3.1.16 disarm

\disarm

\disarm = DISARM \image{disarm.svg}

3.1.17 stun

\stun

\stun = STUN \image{stun.svg}

3.1.18 curse

\curse

\curse = CURSE \image{curse.svg}

3.1.19 bless

\bless

\bless = BLESS \image{bless.svg}

3.1.20 strengthen

\strengthen

\strengthen = STRENGTHEN \image{strengthen.svg}

3.1.21 pierce

```
\pierce{3}
```

```
\pierce{$x$} = PIERCE \image{pierce.svg} $x$
```

3.1.22 generate_wind

```
\generate_wind
```

```
\generate_wind = @big \image{wind.svg} @endlast
```

3.1.23 generate_fire

```
\generate_fire
```

```
\generate_fire = @big \image{fire.svg} @endlast
```

3.1.24 generate_earth

```
\generate_earth
```

```
\generate_earth = @big \image{earth.svg} @endlast
```

3.1.25 generate_ice

```
\generate_ice
```

```
\generate_ice = @big \image{ice.svg} @endlast
```

3.1.26 generate_light

```
\generate_light
```

```
\generate_light = @big \image{light.svg} @endlast
```

3.1.27 generate_dark

```
\generate_dark
```

```
\generate_dark = @big \image{dark.svg} @endlast
```

3.1.28 generate_any

```
\generate_any
```

```
\generate_any = @big \image{any_element.svg} @endlast
```

3.1.29 consume_wind

```
\consume_wind
```

```
\consume_wind = @big \inside{\image{wind.svg}}{\image{consume.svg}} : @endlast
```

3.1.30 consume_fire

```
\consume_fire
```

```
\consume_fire = @big \inside{\image{fire.svg}}{\image{consume.svg}} : @endlast
```

3.1.31 consume_earth

```
\consume_earth
```

```
\consume_earth = @big \inside{\image{earth.svg}}{\image{consume.svg}} : @endlast
```

3.1.32 consume_ice

```
\consume_ice
```

```
\consume_ice = @big \inside{\image{ice.svg}}{\image{consume.svg}} : @endlast
```

3.1.33 consume_light

```
\consume_light
```

```
\consume_light = @big \inside{\image{light.svg}}{\image{consume.svg}} : @endlast
```

3.1.34 consume_dark

```
\consume_dark
```

```
\consume_dark = @big \inside{\image{dark.svg}}{\image{consume.svg}} : @endlast
```

3.1.35 consume_any

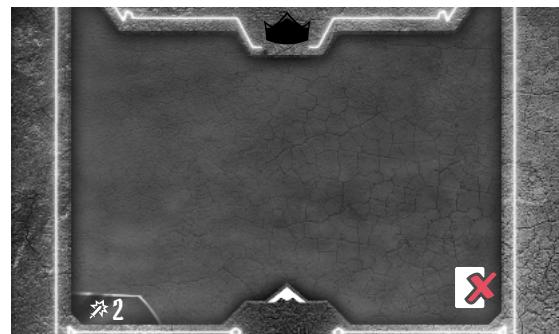

```
\consume_any
```

```
\consume_any = @big \inside{\image{any_element.svg}}{\image{consume.svg}} : @endlast
```

3.1.36 loss

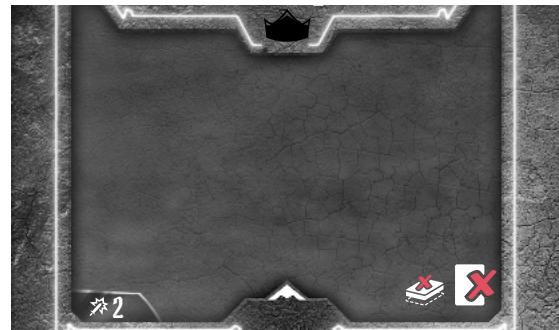

```
\loss
```

```
\loss = @bottomright \image{loss.svg}
```

3.1.37 definitive_loss

```
\definitive_loss
```

```
\definitive_loss = @bottomright \image{definitive_loss.svg} \image{loss.svg}
```

3.1.38 round_bonus

```
\round_bonus
```

```
\round_bonus = \image{round_bonus.svg}
```

3.1.39 permanent

```
\permanent
```

```
\permanent = \image{infinity.svg}
```

3.2 Writing down your own aliases

You can define new aliases in the dedicated section in the graphical interface.

Let's say you have created a new action, `Cleanse` which will be written down on a card as `Cleanse \image{cleanse.svg} 3`. You can define the alias `\cleanse{}` by writing down the following:

```
\cleanse{$x$} = Cleanse \image{cleanse.svg} $x$
```

The dollar signs here are used to mean "anything that the user will write down". This means that you can now use `\cleanse{3}`, `\cleanse{4}` but also (although it wouldn't make much sense) `\cleanse{Attack}`. The name of the variable (here, `x` is used) also doesn't matter, and you can put anything. You can also define aliases with more than one argument. This means that all the following aliases definitions are valid, although most don't really make sense:

```
\cleanse{$x$} = Cleanse \image{cleanse.svg} $x$  
\cleanse{$first$}{$second$} = Cleanse \image{cleanse.svg} $first$ $second$  
$x$ \cleanse{$y$} $z$ = $x$ Cleanse $y$ \image{cleanse.svg} $z$  
\cleanse{$x$} = Cleanse \image{cleanse.svg}
```

What is really happening when you are writing this down? Before parsing, The Sleeping Lion will look through the GML file to see if there is anything that looks like the left hand side of your new alias. If it finds something, it will replace it with the right hand side of your new alias, replacing the variable in dollar signs by their real value. This means that it is strictly equivalent to write down `\cleanse{2}` and `Cleanse \image{cleanse.svg} 2`.

4 Macros

4.1 endlast

Arguments: This macro doesn't take arguments.

Description: Ends the last macro used in this line, except for positional macros (@column2, @topleft and @bottomright).

Example:

```
@small This is a small text, @endlast and this is a normal-sized text.
```

This is a small text, and this is a
normal-sized text.

4.2 end

Arguments: This macro doesn't take arguments.

Description: Ends all previously used macros in this line, except for positional macros (@column2, @topleft and @bottomright).

Example:

```
@small @color{255}{0}{0} Small red text, @end and big white text.
```

Small red text, and big white text.

4.3 small

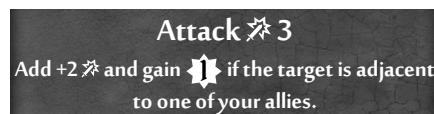

Arguments: This macro doesn't take arguments.

Description: Forces this line to be written in small. This is slightly different from indenting the text: using indentation signals The Sleeping Lion that the default behaviour for this line is to write the text in small; not using indentation signals The Sleeping Lion that the default behaviour for this line is to write the text using the normal font size.

For clarity purpose, this macro should be used on lines where you want to make an exception, and not on lines which should be small by default (such as the line giving the range for a ranged attack).

Example:

```
\attack{3}  
@small Add +2 \image{attack.svg} and gain \exp{1} if the target is  
adjacent to one of your allies.
```

Attack ⚡ 3
Add +2 ⚡ and gain ⚡ if the target is adjacent
to one of your allies.

4.4 big

Arguments: This macro doesn't take arguments.

Description: Forces this line to be written using the normal font size.

Example:

```
@small A small text, @big and a big text.
```

```
A small text, and a big text.
```

4.5 title_font

Arguments: This macro doesn't take arguments.

Description: Allows you to write a text with the same font used for the card's name (Pirata One).

Example:

```
@title_font This is a text using the title font.
```

```
This is a text using the title font.
```

4.6 color

Arguments: This macro takes three arguments, which must be integers between 0 and 255.

Description: Allows you to write text using a specific color. The first argument corresponds to the red value, the second to the green value, the third to the blue value.

Example:

```
@color{0}{0}{0} This is a text written in black.
```

```
@color{255}{0}{0} This is a text written in red.
```

```
This is a text written in black.
```

```
This is a text written in red.
```

4.7 column2

Arguments: This macro doesn't take arguments.

Description: This is an indication that the card should be splitted into two columns, and that this line should be placed in the second column.

This is a positional macro, like `@topleft` and `@bottomright`. Positional macros are unaffected by `@end` and `@endlast`. Furthermore, only the first positional macro of each line is taken into account: if there are more than one positional macro on a given line, all but the first one will be ignored.

Example:

```
\attack{3}
\range{3}
\immobilize
Gain \exp{1} for every enemy targeted
@column2 \aoe{triangle.aoe}
```

4.8 topleft

Arguments: This macro doesn't take arguments.

Description: This is an indication that this line should be placed at the top of the card and centered left, instead of being centered in the middle of the card.

This is a positional macro, like @column2 and @bottomright. Positional macros are unaffected by @end and @endlast. Furthermore, only the first positional macro of each line is taken into account: if there are more than one positional macro on a given line, all but the first one will be ignored.

Example:

```
@topleft Augment
@small On melee attack: Add +2 \image{attack.svg}
```

4.9 bottomright

Arguments: This macro doesn't take arguments.

Description: This is an indication that this line should be placed at the bottom of the card and centered right, instead of being centered in the middle

of the card.

This is a positional macro, like `@column2` and `@topleft`. Positional macros are unaffected by `@end` and `@endlast`. Furthermore, only the first positional macro of each line is taken into account: if there are more than one positional macro on a given line, all but the first one will be ignored.

Example:

```
\attack{6}  
@bottomright \image{loss.svg}
```
